NEW AUTOMATIC DIESEL NOZZLE

- NEW high-flow automatic diesel nozzle. Ideal for truck stops and fleet fueling.
- All metal vent tube/tip end eliminates swelling or shrinking from fuel additions. A common problem with plastic vent tubes. Holds securely in spout, won't crack like the die cast type.
- Roto-matic (patented) smoother positive automatic shut-off.
- Super tuff nylon handguard.

SAFETY “KICKER” FOR HOLD-OPEN CLIP

The “KICKER” is designed to insure the hold-open clip will **always release** when the automatic shut-off occurs. Eliminating the possibility to the main valve being held open, consequently allowing fuel to continue to flow.

A **small change** with a **large impact!**
