THE “KICKER”

A small
change...

...with a
LARGE
impact.

We have added a new feature to our NEW 5-Star nozzle. The indentation on the side of the clip provides a tab on inside of the clip. When the automatic shut off occurs, the lever swings down and contacts the tab on the clip and “KICKS” the clip out of the ratchet plate in the handguard.

This **ensures the clip will always release** when the automatic shut off occurs. The 5-Star clip is similar to the clip on the 11A and 7H type nozzles. Many of these do not release every time and may hold the main valve open, **which will let fuel continue to flow.**

In addition to 5-Star, the “KICKER” will work on the 11A, 7H and other models with this type of clip.
