

Here is the new way of keeping your diesel nozzle from falling out of the fill opening.

M. Carder's NEW line shock absorber spring, will hold the nozzle securely in place. Even with the high line shock that occurs with high speed pumps. The cone shaped spring absorbs the shock - it may bounce, but it won't fall out.

- No spills
- Fits all tank openings
- No interference with the anti-siphoning devices now being installed by many trucking companies

Available for M. Carder FuelMaster, 7H type nozzles and other popular diesel models.

Made in USA
